AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

1. (original): An engine control apparatus, comprising:

a stop switch body for allowing the engine to stop or to be in an idling state;

a stop switch knob that abuts with the stop switch body to activate the stop switch body to allow the engine to stop or to be in an idling state;

a lock plate insertable to the stop switch knob;

a transponder that is provided at the lock plate side and transmits a predetermined ID code; and

a control section that receives the ID code transmitted from the transponder and controls the engine operation based on the ID code, wherein

when the lock plate is disengaged from the stop switch knob, the stop switch body is activated to allow the engine to stop or to be in an idling state, and

the transponder is provided separately from the lock plate and is attached to the lock plate or the vicinity thereof.

2. (original): The engine control apparatus according to Claim 1, wherein the control section changes the engine performance based on the ID code from the transponder, and

AMENDMENT UNDER 37 C.F.R. § 1.111

U.S. Patent Application No.: 10/811,862

Attorney Docket No.: Q80693

the transponder is detachably attached to the lock plate or the vicinity thereof.

3. (new): The engine control apparatus of claim 2, wherein the lock plate includes at

least one convex section that has a groove-like shape over the surface of the lock plates and an

attachment incorporating the transponder is attached to the convex section.

4. (new): The engine control apparatus of claim 2, wherein, based on the ID code the

engine performance can be changed at least between a performance corresponding to a first

engine performance and a performance corresponding to a second engine performance.

5. (new): The engine control apparatus of claim 4, wherein the apparatus is operable to

replace a first transponder with a first ID code corresponding to a first engine performance with a

second transponder with a second ID code corresponding to a second engine performance.

6. (new): The engine control apparatus of claim 4, wherein the first performance

corresponds to a beginner and the second performance corresponds to an experienced user.

7. (new): The engine control apparatus of claim 2, wherein the lock plate includes at

least one concave section with a hole to which an attachment incorporating the transponder is

inserted into.

4

AMENDMENT UNDER 37 C.F.R. § 1.111

U.S. Patent Application No.: 10/811,862

8. (new): The engine control apparatus of claim 2, wherein the lock plate includes an upper end and a lower end, the upper and the lower end each have at least one protrusion with a hole each that are operable to be aligned so that a pin can be inserted, the lower end incorporating the transducer.

Attorney Docket No.: Q80693

- 9. (new): The apparatus of claim 4, wherein the attachment is operable to absorb vibrations from the engine.
- 10. (new): The apparatus of claim 7, wherein the attachment is operable to absorb vibrations from the engine.
- 11. (new): The apparatus of claim 8, wherein the attachment is operable to absorb vibrations from the engine.
